

Figure 6

Figure 6 displays a series of 18 horizontal bar charts arranged in two columns of nine rows each. Each chart shows the percentage distribution of responses for a specific question across five categories: 'Not at all', 'A little', 'Somewhat', 'Quite a bit', and 'Very much'. The questions are listed on the left side of each row.

The questions are:

1. How much do you agree or disagree with the statement "The government should control the amount of television advertising for alcohol?"
2. How much do you agree or disagree with the statement "The government should control the amount of television advertising for tobacco?"
3. How much do you agree or disagree with the statement "The government should control the amount of television advertising for gambling?"
4. How much do you agree or disagree with the statement "The government should control the amount of television advertising for fast food restaurants?"
5. How much do you agree or disagree with the statement "The government should control the amount of television advertising for video games?"
6. How much do you agree or disagree with the statement "The government should control the amount of television advertising for prescription drugs?"
7. How much do you agree or disagree with the statement "The government should control the amount of television advertising for health insurance plans?"
8. How much do you agree or disagree with the statement "The government should control the amount of television advertising for political candidates?"
9. How much do you agree or disagree with the statement "The government should control the amount of television advertising for religious groups?"

The x-axis for each chart represents the percentage of respondents, ranging from 0% to 100%. The y-axis represents the percentage of respondents who chose each response category. The data indicates that most respondents agree or disagree with the statements to some extent, with 'Somewhat' and 'Quite a bit' being the most common responses.
